

## **AMENDMENTS TO THE SPECIFICATION**

Please replace paragraph [62] with the following amended paragraph:

[62] In addition to these advantages, on a network which may have large numbers of workstations or connected devices, a user ~~is does not have to~~ does not need to remember local passwords or identification information for each device connected to the network, but rather can remember only one set of identification information to maintain information security throughout the entire network. This type of system encourages users to safeguard their own password, and not share passwords to pooled devices with other users.
